

Lightweight Steel and Timber Truss Manufacturers

Lightweight Steel & Timber Truss Manufacturers

Dezzo Roofing is a South African based roofing specialist company focused on the manufacture and supply of lightweight steel and timber roof support systems.

We have been involved in a number of different projects and have supplied over 3½ million m² of lightweight steel trusses for projects that have been completed all over the country, as well as Angola, Mozambique, Indonesia, Zambia and Botswana.

Specialists in Steel & Timber Roof Trusses

Dezzo Roofing is a leading roofing company that manufactures and supplies lightweight steel and timber roof trusses. Known as industry pioneers, Dezzo Roofing was one of the first companies in South Africa to pioneer lightweight steel roof support systems. With a portfolio that includes a range of projects throughout South Africa, Africa and Indonesia, Dezzo Roofing's trusses can be found in thousands of buildings around the world. Dezzo Roofing boasts state-of-the-art facilities and equipment, together with highly skilled artisans and a professional and trustworthy work ethic.

Why choose Dezzo Roofing?

We are leading roofing specialists focused on the manufacture and supply of lightweight steel and timber support structures.

 <p>Countrywide delivery at no additional cost</p>	 <p>Competitive pricing</p>	 <p>Accredited installers nationwide</p>	 <p>Great at roofs because it's all we do</p>
 <p>State-of-the-art facilities</p>	 <p>Guaranteed lead time</p>	 <p>Over 100,000 roofs in 15 years</p>	 <p>Owner managed</p>

Our Promise

We are committed to providing the best service possible, especially when it comes to deadlines.

Our Vision

To be the supplier of choice for all homeowners, developers and contractors, while acting with honesty and integrity at all times.

Steel Roofing

Dezzo Roofing Steel has eight roll-forming machines, as well as a fully equipped cut-to-length line and bending facility. The production capacity of the factory is around 500 tons per month, which equates to roughly 90 000m² of roof support material. The factory is 1500m² under roof and a further 1000m² of yard and storage.

In many ways, a steel roofing system beats other conventional roofing materials. Let's take a look at what these benefits are:

- 🏠 In many ways, a steel roofing system beats other conventional roofing materials. Let's take a look at what these benefits are:
- 🏠 A steel roof should last as long as the house it is attached to usually around 50+ years.
- 🏠 Steel trusses are stronger than timber trusses and withstand heavy weather conditions.
- 🏠 Steel trusses are light in weight and can be fabricated in any desired pattern to suit the architectural requirement.
- 🏠 There are no length restrictions with steel trusses and sections can be cut to size, thus eliminating excessive waste on-site.
- 🏠 The sections forming a steel truss are easily transported.
- 🏠 Manufacturing a steel roof truss is a faster process and reflects a quick turnaround time.
- 🏠 For comprehensive steel roofing solutions, contact Dezzo Roofing today.

Advantages of Steel Roofing Systems:

- 🏠 Dezzo Roofing was one of the first companies in South Africa to pioneer a lightweight steel roof support system, giving us extensive experience in this field.
- 🏠 Engineer designed (including Professional Indemnity Insurance).
- 🏠 Our systems are manufactured from aluminium and zinc coated steel that is known to last 4 to 6 times longer than the same galvanized material (Australian testing).
- 🏠 These systems are easily constructed, enabling a quicker installation time.
- 🏠 The roof trusses are lightweight and easy to handle.
- 🏠 Battens and purlins are cut to length to suit every roof, thus greatly reducing on-site cutting and waste.
- 🏠 Trusses are manufactured by highly trained steel artisans, and are assembled in jigs in order to maintain consistency.
- 🏠 The roof system is not susceptible to termite or borer infestation.
- 🏠 Components will not rot or warp (like timber).
- 🏠 Flexibility in terms of roof designs and roof shapes. Can be used with concrete tiles, steel sheeting, pressed steel tiles, and fibre cement sheeting.

Pioneers in Steel Roof Trusses

Dezzo Roofing specialises in the manufacture, supply and installation of lightweight steel roof support systems, a viable and cost-effective alternative to conventional timber roof systems. Dezzo Roofing has been involved in numerous projects across the continent, ranging from residential houses and rural schools, to social facilities, hotels, factories, army barracks and office buildings.

We are at the forefront of lightweight steel roof trusses, specifically designed and manufactured to carry concrete roof tiles, steel sheeting and fibre cement sheeting. Our product range caters for all roofing styles – from basic lattice and girder beams to profiled steel sheeting and trusses that can hold concrete, pressed steel, or any other profiled steel roof sheets.

Dezzo Roofing supplies a knockdown kit that includes trusses, battens, tilting battens, beams and purlins. All the Dezzo Roofing steel components are manufactured from zinc and aluminium coated steel. This makes them superior because they are stronger, lighter and more economical to use than traditional roofing system materials.

Timber Roofing

Dezzo Roofing timber specialises in the manufacture and supply of treated timber roof trusses. As an approved ITC manufacturer with a modern timber truss processing plant, including a factory of 400m² under roof, Dezzo Roofing is equipped to successfully complete a range of projects of a great variety of specifications.

In 2002 Dezzo Roofing started manufacturing treated timber roof trusses, initially for the RDP market, but now focuses on the middle to upper-income residential market as well as schools, office blocks, and smaller commercial requirements. All our designs are carried out using I.T.S. software.

Dezzo Roofing is audited annually by the Institute for Timber Construction South Africa to ensure that the facility is kept to the high standards required by Alpine Automation and ITC. Dezzo Roofing is equipped to successfully complete a range of projects of a great variety of specifications.

Authorities on Timber Roof Trusses

At Dezzo Roofing we are pleased to provide our clients with top-quality, professional products and materials that are manufactured independently at our timber truss processing plant. We pride ourselves on our professional and trustworthy work ethic. We manufacture top-quality products with our clients' needs at the forefront of our work.

Specialising in treated timber roof trusses, Dezzo Roofing's processing plant is an ITC approved manufacturer with each design being tailor-made to suit the client's needs and requirements. Each of our projects is carefully carried out utilising I.T.S Software that enables us to ensure the manufacturing of only the best quality roof trusses – focusing on the middle to upper-income residential markets, schools, office blocks, and smaller commercial requirements.

Industrial, Commercial & Residential

Dezzo Roofing has completed a range of industrial, commercial and residential projects, including several residential homes, shopping centres, factories, schools, clinics and churches, to name but a few. Dezzo Roofing is actively exploring these areas in the marketplace.

CLIENT	AREA
Dezzo Botswana	Ablution / kitchen / schools
Parkhome	Namibia and SA
HMS Hardware	Himeville Magistrate Court
Cousins Steel	Mozambique factory
Cousins Steel	Uvongo factory
LT Agencies	Adelaide School
Marulelo Roofing	Xtrata School x 3 blocks
JT Ross	Ballito Junction Shopping Centre

Dezzo Roofing is a proud member of:

Low Cost Housing

This segment of the market is usually supplied with sheeted roofing systems, however over the past few years Dezzo Roofing has worked in conjunction with a concrete tile manufacturer in order to supply communities with concrete tiled roofing systems, using our lightweight support system. This roofing solution has proven to be a winner amongst communities, municipalities, government and developers.

CLIENT	AREA
Dezzo Development Holdings	Dundee
Ethekwini Municipality	Cato Ridge
Motheo	Bizana
Toro	Cosmo City
Umphele	Newcastle
Unocor	Pamperstad
Aveng Manufacturers	Witbank
Sarkum Housing	Hammersdale

Dezzo Roofing also offers a range of lightweight steel systems for the RDP market. These steel systems have all the advantages offered by the steel trusses. These options include combinations such as beam or truss and sheet (galvanized or fibre cement), as well as truss and concrete tile.

Structural Engineering Design

Dezzo Roofing designs are carried out by an independent structural engineering firm that is registered with the South African Institute of Civil Engineering (SAICE) as well as the South African Light Steel Frame Building Association (SASFA).

In association with its Engineer, Dezzo Roofing provides a complete service that includes:

- 🏠 Design advice at the time of project design
- 🏠 Manufacturing
- 🏠 Installation
- 🏠 Rational design for all roof systems
- 🏠 Completion certification
